

PURSANG (9-CELL RADICALLY ELLIPTICAL)

Pursang is the latest generation of 9 cell zp radically elliptical canopies. Its advanced design provides some astonishing flight velocities previously unseen on a canopy with such gliding performance and so extraordinarily maneuverable.

Pursang is the first canopy in the world that incorporates the new Synchronized Inflow Control System SICS® to control the inflation process during deployment. This innovative system developed by CIMSA Ingeniería de Sistemas results in very soft and straight canopy deployments even in very high wing loading conditions.

Pursang is a high performance canopy designed for experienced canopy pilots looking for extreme sensations without the hassle of awkward deployment sequences seen in other high performance canopies. Its large flight envelope makes it easy to enjoy and bring confidence to the pilot allowing to obtain large flares easily and impress the crowds.

Like all sports canopies manufactured by CIMSA Ingeniería de Sistemas, Pursang is available in any size, although its optimum range falls between 80 sq.ft and 130 sq.ft.

Model	P/N	Size (Sq.Ft.)	MSW (Lbs)	Weight (Lbs)
PURSANG-80	317541-80	80	160	2.5
PURSANG-90	317541-90	90	180	2.5
PURSANG-100	317541-100	100	200	3.0
PURSANG-110	317541-110	110	220	3.0
PURSANG-120	317541-120	120	240	3.5
PURSANG-130	317541-130	130	260	3.5
PURSANG-140	317541-140	140	280	3.5
