

The RC is a 7-cell reserve canopy made of low porosity fabric and Spectra lines for reduced pack volume.

Its designed and constructed as a low aspect ratio parachute with a rectangular planform for stability during opening, flight and landing, exhibiting predictable behavior throughout its entire flight. Sizes are available from 100 to 280 sq.ft.

The RC exceeds the requirements of the Aerospace Standard AS8015B, the FAA TSO-C23d and the EASA ETSO-C23d. Its rugged construction uses additional reinforcement chord wise, span wise, throughout the nose, and at all line attachment points.

The RC canopy features a low pack volume as compared to other reserve parachutes, thanks to the use of 0-3 CFM low permeability, high quality rip stop fabric together with its unique reinforced construction.

The suspension lines are 725lb Spectra, with the lower steering lines made of 1000lb Spectra. Line attachment points are secured with double bar tacks for higher strength. RC Spectra lines are coated to assure better protection during packing, opening and after landing, better resisting damage from bushes, sand, Velcro hook, etc...

The RC is manufactured under the highest Quality Control standards. All materials are thoroughly inspected and tested according to PIA standards.

Model	P/N	Size (Sq.Ft.)	MSW (Lbs)	Weight (Lbs)
RC-100	317523-100	100	131	6
RC-110	317523-110	110	144	6
RC-120	317523-120	120	159	6
RC-122	317523-122	122	162	6
RC-130	317523-130	130	171	7
RC-140	317523-140	140	184	7
RC-150	317523-150	150	197	7
RC-154	317523-154	154	204	7
RC-170	317523-170	170	224	7
RC-190	317523-190	190	250	8
RC-220	317523-220	220	255	9
RC-240	317523-240	240	255	10
RC-260	317523-260	260	255	10
RC-280	317523-280	280	255	10
